

Do you feel a need for easy multi-factor authorization?

Cavion has an option for the account holder to leverage a secure token that bypasses the multi-factor authorization (challenge) questions.

How does it work?

The account holder will create a secure token and save it to their desktop, USB key, or other device. On the next login attempt, the account holder will simply double click on the secure token icon and enter their password.

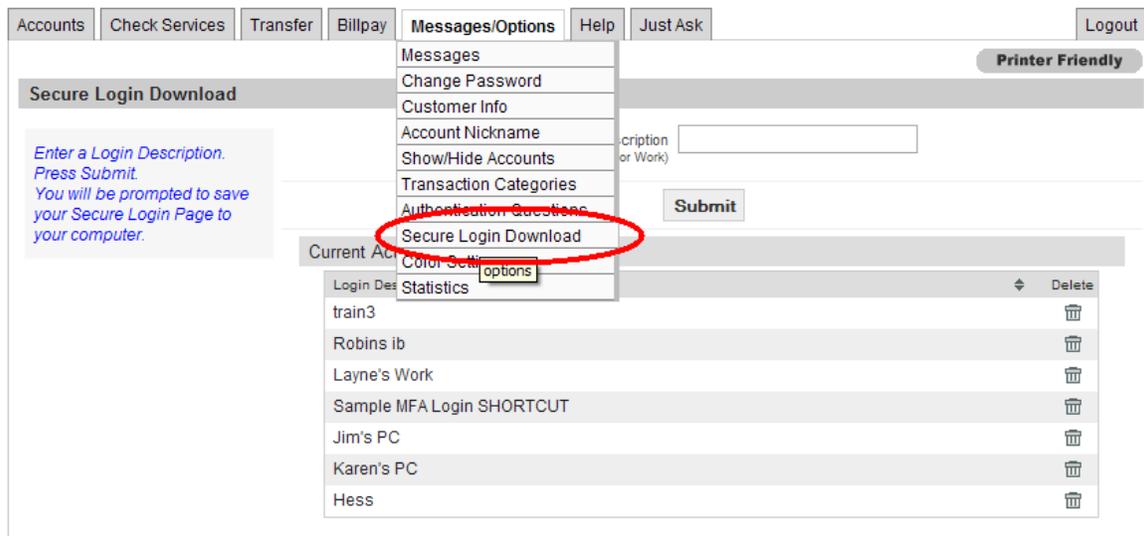

If the password is correct, Internet Banking will display.

Create a Secure Login

Step 1)

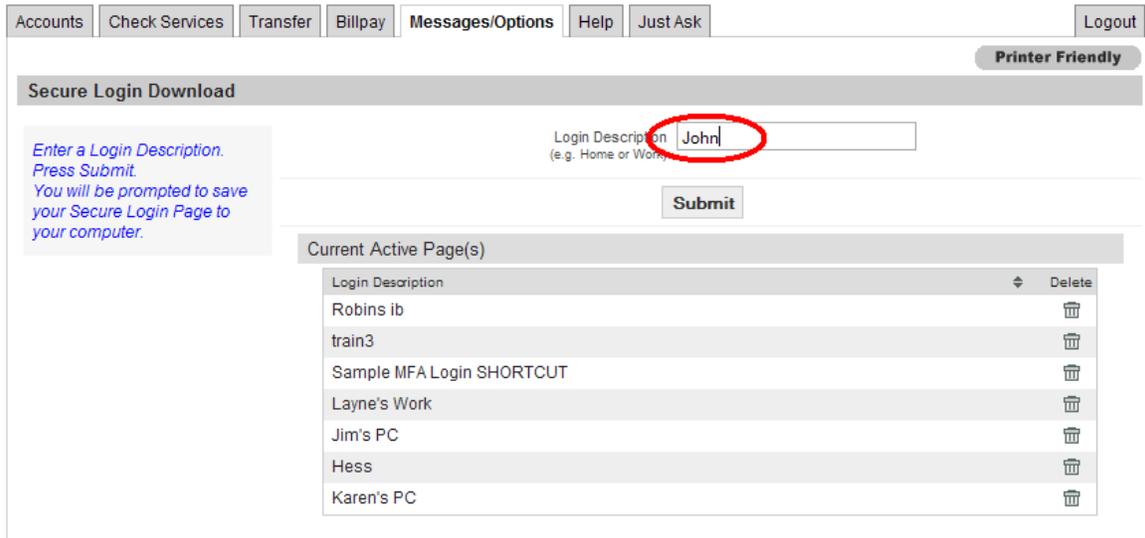

Navigate to the menu option for Secure Login Download

Note: Some menus have custom language, so the display may be slightly different than the print screens.

The screenshot shows the Cavion internet banking interface. At the top, there are navigation tabs: Accounts, Check Services, Transfer, Billpay, Messages/Options, Help, Just Ask, and Logout. The 'Messages/Options' menu is open, displaying a list of options: Messages, Change Password, Customer Info, Account Nickname, Show/Hide Accounts, Transaction Categories, Authentication Questions, Secure Login Download (circled in red), and Statistics. Below the menu, there is a 'Secure Login Download' section with a text box containing instructions: 'Enter a Login Description. Press Submit. You will be prompted to save your Secure Login Page to your computer.' and a 'Submit' button. At the bottom, there is a table with columns for 'Login Description' and 'Delete'. The table contains several entries: train3, Robins ib, Layne's Work, Sample MFA Login SHORTCUT, Jim's PC, Karen's PC, and Hess.

Step 2)
Enter a description for this Secure Login

Accounts | Check Services | Transfer | Billpay | Messages/Options | Help | Just Ask | Logout

Printer Friendly

Secure Login Download

Enter a Login Description.
Press Submit.
You will be prompted to save your Secure Login Page to your computer.

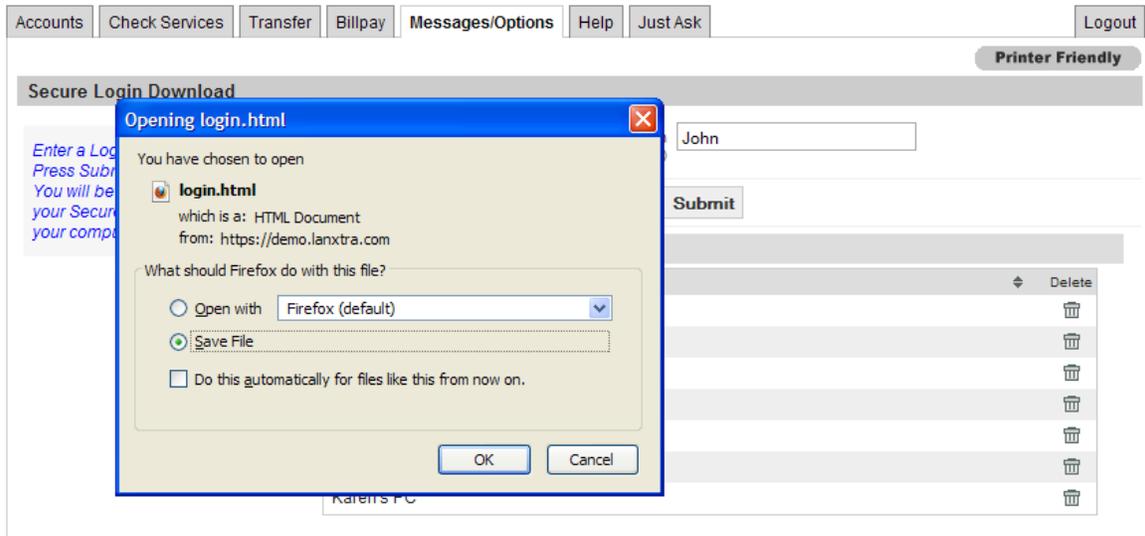

Login Description (e.g. Home or Work)

Submit

Questions

Is there an additional cost for this feature?

No, this feature is included in the base package.

What release is this feature available in?

This feature was made available in version 3.4.0. In version 3.4.6 and beyond, the feature is enabled by default.

Will this work for business banking and consumer banking?

Yes, the secure client works for both consumer banking and business banking.

What happens if the account holder loses the USB device?

The account holder manages the secure client(s) in internet banking and may delete a lost secure token.

Can the account holder create multiple secure tokens?

Yes, multiple secure tokens may be generated for each account holder. This ability facilitates the need for a business to create unique secure tokens for each employee that has access to internet banking.

Is the use of secure tokens mandatory?

No, the FI may choose to disable this option.

Can secure tokens be enabled for business banking only?

Yes, this feature can be enabled only for business banking.
